(POD), this thoroughly revised, updated, and expanded edition offers a fundamental resource for faculty developers, as well as for faculty and administrators interested in promoting and sustaining faculty development within their institutions. This essential book offers an introduction to the topic, includes twenty-three chapters by leading experts in the field, and provides the most relevant information on a range of faculty development topics including establishing and sustaining a faculty development program; the key issues of assessment, diversity, and technology; and faculty development across institutional types, career stages, and organizations.

"This volume contains the gallant story of the emergence of a movement to sustain the vitality of college and university faculty in difficult times. This practical guide draws on the best minds shaping the field, the most productive experience, and elicits the imagination required to reenvision a dynamic future for learning societies in a global context." —R. Eugene Rice, senior scholar, Association of American Colleges and Universities "Across the country, people in higher education are thinking about how to prepare our graduates for a rapidly changing world while supporting our faculty colleagues who grew up in a very different world. Faculty members, academic administrators, and

policymakers alike will learn a great deal from this volume about how to put together a successful faculty development program and create a supportive environment for learning in challenging times." —Judith A. Ramaley, president, Winona State University "This is the book on faculty development in higher education. Everyone involved in faculty development—including provosts, deans, department chairs, faculty, and teaching center staff—will learn from the extensive research and the practical wisdom in the Guide." —Peter Felten, president, The POD Network (2010–2011), and director, Center for the Advancement of Teaching and Learning,

 Curriculum
 Development can be defined as the systematic planning of what is taught and learned in schools as reflected in courses of study and school programs. These curricula are embodied in official documents (typically curriculum "guides" for teachers) and made mandatory by provincial and territorial departments of education. The primary focus of a curriculum is on what is to be taught and when, leaving to the teaching profession decisions as to how this should be done. *Knowledge, Ideology & Discourse*

This collection of 10 original essays honors the intellectual legacy of Everett M. Rogers (1931-2004), the pioneering and distinguished teacher-scholar of diffusion of innovations, communication networks, technology transfer, development communication, and the entertainment-education strategy. Well-known colleagues and contemporaries write on these topics that especially piqued Rogers' curiosity, and to which he made seminal and lasting contributions.

Plant-parasitic nematodes devastate crops worldwide, in turn impacting international trade, social and economic development. Effective control of nematodes is

essential for crop protection, and requires an understanding of nematode biology, taxonomy, population dynamics and sampling methods. Providing a broad introduction to nematodes as plant parasites, this book begins by describing nematodes by genera, and builds on this foundation to detail nematode biology and pest management, including biological and chemical control. Chapters are authored by international experts and enhanced by extensive illustrations and focus boxes. Fully updated throughout, this new edition is an essential resource for postgraduate students, extension officers, researchers and crop protection scientists.

Communication of Innovations

Pests and plant interaction is a dynamic system, which is beyond our imaginations and thoughts in the universe. Plants and insects are highly diverse groups due to their ability to exploit a wide range of niches, from the desert to the arctic zone and also almost all the plant species growing on the planet. Plants and insects make up together approximately half of all known species of multicellular organisms. Each plant interacts with insects in a different manner; insects may act as protection, dispersers, or fertilizers for plants while plants may be a food/energy resource

or nest location for insects. In an environment with changing availability and quality of host plants, phytophagous insects are under selection pressure to find quality hosts. They need to maximize their fitness by locating suitable plants and avoiding unsuitable ones. Thus, they have evolved a finely tuned sensory system, for detection of host cues, and a nervous system, capable of integrating inputs from sensory neurons with a high level of spatio-temporal resolution. Insect responses to cues are not fixed but depend on the context in which they are perceived, the physiological state of the insect, and prior learning experiences. However, there are

examples of insects making 'mistakes' and being attracted to poor quality hosts. While insects have evolved ways of finding hosts, plants have been under selection pressure to do precisely the opposite and evade detection or defend themselves when attacked. Once on the plant, insect-associated molecules may trigger or suppress defence depending on whether the plant or the insect is ahead in evolutionary terms. Plant volatile emission is influenced by defence responses induced by insect feeding or oviposition which can attract natural enemies but repel herbivores. Conversely, plant reproductive fitness is increased by attraction

of pollinators. Interactions can be altered by other organisms associated with the plant such as other insects, plant pathogens, or mycorrhizal fungi. Plant phenotype is plastic and can be changed by epigenetic factors in adaptation to periods of biotic stress. Space and time play crucial roles in influencing the outcome of interactions between insects and plants. This book has been designed to suit the knowledge and pursuit of the researcher and scholars and to empower them with various aspects of plant-pest interactions, so that they are updated with the information. I hope that the readers find the book explanatory and insightful and that this

book is referred by the scholars across various fields.

It's Little Red Riding Hood as you've never seen her before in this funny, feminist spin on the fairy tale, from award-winning author Ursula Vernon Most monsters know better than to mess with Princess Harriet Hamsterbone. She's a fearsome warrior, an accomplished jouster, and is so convincing that she once converted a beastly Ogrescat to vegetarianism. So why would a pack of weasel-wolf monsters come to her for help? Well, there's something downright spooky going on in the forest where they live, and it all centers around a mysterious girl in a red

cape. No one knows better than Harriet that little girls aren't always sweet. Luckily there's no problem too big or bad for this princess to solve. In this sixth installment of her whip-smart Hamster Princess series, Ursula Vernon once again upends fairy tale tropes and subverts gender stereotypes to brilliant effect. This is a "Once Upon a Time" like you've never seen before.

For more than three decades Michael Apple has sought to uncover and articulate the connections among knowledge, teaching and power in education. Beginning with *Ideology and Curriculum* (1979), Apple moved to understand the relationship between and among the economy, political and cultural power in society on the one hand "and the ways in which education is thought about, organized and evaluated" on the other. This edited collection invites several of the world's leading education scholars to reflect on the relationships between education and power and the

continued impact of Apple's scholarship. Like Apple's work itself, the essays will span a range of disciplines and inequalities; emancipatory educational practices; and the linkage between the economy and race, class and gender formation in relation to schools.
