EPA's Office of Transportation and Air Quality (OTAQ) is developing the MOtor Vehicle Emission Simulator (MOVES).

This new emission modeling system will estimate emissions for on-road and nonroad mobile sources, cover a broad range of pollutants, and allow multiple scale analysis--from fine-scale analysis to national inventory estimation. When fully implemented, MOVES will serve as the replacement for MOBILE6 and NONROAD for all official analyses associated with regulatory development, compliance with statutory requirements, and national/regional inventory projections.

EPA's 2008 Report on the Environment Business & Legal Reports, Inc.

[The report]... provides the American people with an important resource from which they can better understand trends in the condition of the air, water, land, and human health of the United States.

This report uses scientifically sound measures, called indicators, to address fundamental questions relevant to the EPA's mission to protect the environment and human health. To accomplish its mission to protect human health and the environment, EPA must pay close attention to trends in the condition of the Nation's environment. This kind of information, which is captured in EPA's 2008 ROE, can help EPA to prioritize its work and to focus on human health and ecological activities that can lead to improvements in the conditions of the Nation's environment.

HVAC Training 101 is a site visited by over 100,000 enthusiasts monthly, who are interested in becoming HVAC technicians. The site initially began as the passion project of a retired HVAC technician. The site quickly gained popularity, building a strong community of aspiring HVAC technicians. Currently, it is managed by a team of ex-HVAC technicians with decades of experience in the industry. Head over to HVACTraining101.Com to learn more. We began by writing about how to become certified as an HVAC technician. With rules and certifications varying for each state, it was a challenging task. We had a few friends in other states help us

out, but for some states, we had to dig really deep to find the information needed. Our audience at the time was very happy with the information we provided. At this point, we started getting many questions about EPA 608 certification. Once you get the education and experience needed to become a technician, prospective employers will ask for certification to handle refrigerants. When we started writing about how to become certified, viewers again requested we write a study guide to help them prepare for the 608 exams. The study guides out there were dense and had much more information than was needed to pass the test. This inspired us to embark on a journey to write the simplest study guide for the EPA 608 exam, which would still cover all

the necessary information. We hope we have achieved our intended objective. The journey to becoming an HVAC technician can be long and arduous. We congratulate you on taking this path and wish you the best in cracking the EPA 608 exam.

The U.S. Environmental Protection Agency enforces an extensive array of federal environmental laws and regulations, and it delegates enforcement authority to state

environmental officials as well. These laws may affect not only major manufacturing operations (like chemicals and automobiles), but also small businesses and operations such as hospitals, universities, farms, and municipal governments. Failure to comply may subject firms and their officers and employees to federal and state administrative proceedings, civil lawsuits, and criminal prosecutions. To help firms and individuals comply with the law and deal effectively with the EPA, this new book provides, in convenient question and- answer format, a brief overview of the main federal environmental laws, and it then focuses in detail on the practical aspects of compliance and enforcement. Is state enforcement less stringent than federal

enforcement? What does a typical permit provide? What are the enforcement consequences of failing to comply with monitoring and reporting requirements? How does EPA set its enforcement priorities? What triggers an EPA inspection? What is the first thing that should be done when an inspector arrives? What is an environmental crime? Can a corporate officer be prosecuted for the conduct of an employee? What is an administrative compliance order? What is a notice of violation? What is the role of the Department of Justice in environmental enforcement? What does "imminent and substantial endangerment" mean? What is "economic benefit" and why does EPA seek to recover it as part of the penalty calculation? Is compliance with the

language of the permit a defense? How does bankruptcy affect enforcement actions by EPA? What are the benefits of implementing an environmental management system? How does one make a voluntary disclosure under EPA's audit policy? Can a citizen suit be brought if EPA or a state is pursuing an enforcement action for the same conduct? These questions and hundreds of others are answered clearly and succinctly by Adam Sowatzka and Richard E. Glaze, Jr., based on the expertise they have gained both as lawyers for the government and as private practitioners advising clients regarding environmental compliance. As pointed out in the Foreword by Fred L. Burnside (Former Director, U.S. EPA Office of Criminal Enforcement,

Forensics and Training), EPA's enforcement programs have evolved, and today "the government utilizes a wide range of resources to investigate enforcement matters, including inspectors, criminal investigators, regulatory experts, sampling technicians, chemists, agency enforcement attorneys, and civil and criminal prosecutors. Companies and corporate officials, often finding themselves at the mercy of government personnel and an unpredictable timetable, need their own resources to respond effectively." The EPA Compliance and Enforcement Answer Book provides an essential resource to help level the playing field.

EPA's Final Pesticides and Ground-water Strategy DIANE Publishing

This publication provides responses to questions received by the Environmental Protection Agency (EPA) concerning the manner in which the EPA intends to implement and assure compliance with the diesel fuel sulfur regulations at 40 CFR Part 80. This document was prepared by EPA's Office of Air and Radiation, Office of Transportation and Air Quality, and the Office of Enforcement and Compliance Assurance, Office of Regulatory Enforcement. Regulated parties may use this document to aid in achieving compliance with the diesel fuel sulfur regulations. However, this document does not in any way alter the requirements of these regulations. While the answers provided in this document represent the Agency's interpretation and general plans for

implementation of the regulations at this time, some of the responses may change as additional information becomes available or as the Agency further considers certain issues.
