These diverse essays investigate political factors behind the rapid development of cartography in Renaissance Europe and its impact on emerging European nations. By 1500 a few rulers had already discovered that better knowledge of their lands would strengthen their control over them; by 1550, the cartographer's art had become an important instrument for bringing territories under the control of centralized government. Throughout the following century increasing governmental reliance on maps demanded greater accuracy and more sophisticated techniques. This volume, a detailed survey of the political uses of cartography between 1400 and 1700 in Europe, answers these questions: When did monarchs and ministers begin to perceive that maps could be useful in government? For what purposes were maps commissioned? How accurate and useful were they? How did cartographic knowledge strengthen the hand of government? By focusing on particular places and periods in early modern Europe, the chapters offer new insights into the growth of cartography as a science, the impetus behind these developments - often rulers attempting to expand their power - and the role of mapmaking in European history. The essay on Poland reveals that cartographic progress came only under the impetus of powerful rulers; another

explores the French monarchy's role in the burst of scientific cartography that marked the opening of the "splendid century". Additional chapters discuss the profound influence of cartographic ideas on the English aristocracy during the sixteenth century, the relation of progress in mapmaking to imperialistic goals of the Spanish and Austrian Habsburgs, and the supposed primacy of Italian mapmaking following the Renaissance. Contributors to this volume are Peter Barber, David Buisseret, John Marino, Michael J. Mikos, Geoffrey Parker, and James Vann. These essays were originally presented as the Kenneth Nebenzahl, Jr., Lectures in the History of Cartography at the Newberry Library. *The Nation [Electronic Resource]* Soleil « C'est arrivé d'au-delà des étoiles, un évènement cosmique que nous n'aurions jamais pu prévoir, une rupture dans l'espace-temps qui pulvérisa toute notre existence. Pas seulement notre présent, mais aussi notre passé et notre futur. Disparus. Ne demeura que le vide. Cependant, ce n'était pas la fin. Émergeant du grand silence, la terre renaquit, mais d'une façon que nous n'avions jamais imaginée... » Diego Ribera est un enfant du nouveau monde. Il est né après la Collision temporelle. In accordance with Article 102 of the Charter and the relevant General Assembly Resolutions, every treaty and international agreement registered or filed and recorded with the Secretariat since 1946 is published in the United Nations Treaty Series. At present, the collection includes about 30,000 treaties reproduced in their authentic languages, together with translations into English and French, as necessary. The Treaty Series, where treaties are published in

the chronological order of registration, also provides details about their subsequent history (i.e., participation in a treaty, reservations, amendments, termination, etc.). Comprehensive Indices covering 50-volume-lots are published separately.

Starred review (Publishers Weekly) A

historically unprecedented disconnect between humanity and the heavens has opened. Jo Marchant's book can begin to

heal it. For at least 20,000 years, we

have led not just an earthly existence

but a cosmic one. Celestial cycles drove

every aspect of our daily lives. Our

innate relationship with the stars shaped

who we are—our art, religious beliefs,

social status, scientific advances, and

even our biology. But over the last few

centuries we have separated ourselves

from the universe that surrounds us. It's

a disconnect with a dire cost. Our

relationship to the stars and planets has

moved from one of awe, wonder and

superstition to one where technology is

king—the cosmos is now explored

through data on our screens, not by the

naked eye observing the natural world.

Indeed, in most countries, modern light

pollution obscures much of the night sky

from view. Jo Marchant's spellbinding

parade of the ways different cultures

celebrated the majesty and mysteries of

the night sky is a journey to the most

awe-inspiring view you can ever see:

looking up on a clear dark night. That

experience and the thoughts it has

engendered have radically shaped

human civilization across millennia. The cosmos is the source of our greatest creativity in art, in science, in life. To show us how, Jo Marchant takes us to the Hall of the Bulls in the caves at Lascaux in France, and to the summer solstice at a 5,000-year-old tomb at Newgrange, Ireland. We discover Chumash cosmology and visit medieval monks grappling with the nature of time and Tahitian sailors navigating by the stars. We discover how light reveals the chemical composition of the sun, and we are with Einstein as he works out that space and time are one and the same. A four-billion-year-old meteor inspires a search for extraterrestrial life. The cosmically liberating, summary revelation is that star-gazing made us human.

 NEW YORK TIMES BEST SELLER • From the indie rock sensation known as Japanese Breakfast, an unforgettable memoir about family, food, grief, love, and growing up Korean American—"in losing her mother and cooking to bring her back to life, Zauner became herself" (NPR) • CELEBRATING OVER ONE YEAR ON THE NEW YORK TIMES BEST SELLER LIST In this exquisite story of family, food, grief, and endurance, Michelle Zauner proves herself far more than a dazzling singer, songwriter, and guitarist. With humor and heart, she tells of growing up one of the few Asian American kids at her school in Eugene, Oregon; of struggling with her mother's particular, high expectations of her; of a painful adolescence; of treasured months spent in her grandmother's tiny apartment in Seoul, where she and her mother would bond, late at night, over heaping plates of food. As she grew up, moving to the East Coast for college, finding work in the restaurant industry,

and performing gigs with her fledgling band--and meeting the man who would become her husband--her Koreanness began to feel ever more distant, even as she found the life she wanted to live. It was her mother's diagnosis of terminal cancer, when Michelle was twenty-five, that forced a reckoning with her identity and brought her to reclaim the gifts of taste, language, and history her mother had given her. Vivacious and plainspoken, lyrical and honest, Zauner's voice is as radiantly alive on the page as it is onstage. Rich with intimate anecdotes that will resonate widely, and complete with family photos, *Crying in H Mart* is a book to cherish, share, and reread.

For fans of *The Golden Compass*, this New York Times bestseller will take you on a fantastic journey across worlds and time. Boston, 1891. Sophia Tims comes from a family of explorers and cartographers who, for generations, have been traveling and mapping the New World—a world changed by the Great Disruption of 1799, when all the continents were flung into different time

periods. Eight years ago, Sophia's parents left her with her uncle Shadrack, the foremost cartographer in Boston, and went on an urgent mission. They never returned. Then Shadrack is kidnapped. Sophia must search for him with the help of Theo, a refugee from the West. Together they travel over rough terrain and uncharted ocean, encounter pirates and traders, and rely on a combination of Shadrack's maps, common sense, and Sophia's unusual powers of observation. Little do they know that their lives are in as much danger as Shadrack's. A New York Times Bestseller! "I am in no doubt about the energy of S.E. Grove as a full-fledged, pathfinding fantasist. I look forward to the next installment to place upon the pile. Depending on the breadth or narrowness

of the understanding of politics and the political, "politics" in human geography is defined as either the operation of power in all social relations or the workings of power directed to or by the state. This volume avoids the two extremes by acknowledging the transformation of approaches to the political in human geography over the past few decades but also by highlighting the continued importance of the more traditional state-based conception of politics. The selected articles are clustered around six themes: new agendas in political geography, state territoriality, international relations and globalization, internal territorial organisation and geographical scale, social movements and electoral participation, and identities and citizenship.

American Studies: The Basics Bayard Jeunesse

American Studies: The Basics is an accessible and concise introduction that aims to unpack what American studies does and why it matters. From Moby-Dick to baseball, Hollywood westerns to #BlackLivesMatter, and Disneyland to the U.S. Supreme Court, American studies engages with a myriad of topics in its efforts to understand what the French sociologist Jean Baudrillard called 'social and cultural America.' The book begins by considering how America was studied before American studies' emergence as a recognized discipline in the mid-twentieth century. Successive chapters then explore the rise of American studies, its varied subjects, its distinctive methods of research, its geographical framing, and its politics. Throughout the book, explanatory examples are drawn from across American history and culture. Photographs are examined alongside novels, and historical monuments discussed next to films. The text offers an ideal way into an exciting academic subject of continuing growth and relevance. This book is a must read for those studying and with an interest in American studies.
