This edited volume brings together the expertise of numerous specialists on the topic of particles -

their physical, chemical, pharmacological and toxicological characteristics - when they are a component of pharmaceutical products and formulations. The book discusses in detail properties such as the composition, size, shape, surface properties and porosity of particles with respect to how they impact the formulations and products in which they are used and the effective delivery of pharmaceutical active ingredients. It considers all dosage forms of pharmaceuticals involving particles, from powders to tablets, creams to ointments, and solutions to dry-powder inhalers, also including the latest nanomedicine products. Further, it discusses examples of particle toxicity, as well as the important subject of pharmaceutical industry regulations, guidelines and legislation. The book is of interest to researchers and practitioners who work on testing and developing pharmaceutical dosage and delivery systems.  Subtle yet rich descriptions of culture,

society, and family life in Belize adorn Zee Edgell's beautifully narrated story of a short time in the life of 14-year-old Beka Lamb. Through flashbacks, points on politics and independence are animated, since the political struggles for independence in Belize reflect Beka's own developing maturity and need to assert herself. Two main features of this heartwarming story are Beka's penchant for lying and her relationship with her older friend Troycie, whose troubling choices lead her down a self-destructive path. The pride of winning an essay contest at her convent school releases Beka's grief over Troycie and empowers her to embrace the next phase of her life.
