Management Accounting, 4th Edition

Springer Nature

Current modern companies, which are also the key factors of a global economy, are subject to increasing pressures to conduct their business in an environmentally responsible manner, due to social and environmental problems. Improving long-term environmental performance can bring economic benefits to those companies that are innovative and environmentally sensitive, especially by integrating environmental information into their business strategies. Considering all the changes, sustainability reporting, management, and financial accounting

becomes a powerful information tool for executives, managers, and employee teams to gain insights and make better decisions. Along with concepts such as ethical, controlling, auditing, management, and financial accounting, reporting provides value with the decision-making process. All these debates underline the major responsibility of users when configuring accounting and finance models and thereby in modelling business information. Sustainability Reporting, Ethics, and Strategic Management Strategies for Modern Organizations proposes an interdisciplinary perspective and explores various theoretical and practical approaches of ethical standards, management accounting, and their impact in the 21st century on different areas of activity. It contrasts external financial accounting for government regulators and

the investment community with internal management accounting for managers to leverage for decision making. In addition, the book examines the role of management accounting and sustainability reporting from other points of view such as ethical standards, corporate social responsibility, creative accounting, green accounting, environmental indicators, e-accounting, KPI, lean accounting, controlling, auditing, reporting, etc., offering a number of new insights into management accounting. It is intended for chief financial officers, financial controllers, business analysts, financial planners, financial analysts, budgeting managers, executives, managers, academicians, researchers, and students.

This book focuses on research in

management accounting that uses Malaysia's business environment as the scope of study. The motivation to embark on this publication was due to the recognition that although management accounting has received increasing interest from various organizations including government, businesses and educators, published documents that report findings from research in management accounting undertaken in Malaysia are still limited. The objective of this book is to address the gap by providing readers with five research oriented articles on management accounting issues, namely Performance Measurement Design in Service Organizations; Management Accounting and Control Systems in the Service Sector; Activity Based Costing; Intellectual Capital and Management Accounting Practices; and Customer Focused Manufacturing Strategy and Performance Measurement Systems. The articles are written by a pool of active researchers in the area of management accounting, and are expected to have high academic value. Each is complete with a literature review, methodology, data analysis and references. Even though this is the case, the articles have also been carefully chosen and edited for the general reader. This book is suitable as a reference for researchers, academics, managers, accountants, and policy makers.

This book analyzes the impact of digitization on management accounting in five manufacturing companies. It is one of the first in-depth empirical studies on the intersection of management accounting and digitization. The study suggests that there are two archetypes of digitization of the management accounting function. The first archetype emphasizes top-down-driven changes that aim to enhance efficiency, such as conducting tasks with a higher degree of automation in a leaner structure with fewer resources. The second archetype is strongly driven and initiated by employees in the management accounting function (bottom-up). The focus is on improving the use of data by applying innovative analytics methods, integrating additional sources of data, and benefiting from new technologies like artificial intelligence. The results of the study also indicate that digitization of the management accounting function is mostly in line with the overall company strategy.

Bank Regulation: Effects on Strategy, Financial Accounting and Management Control discusses and problematizes how regulation is affecting bank strategies as well as their financial accounting and management control systems. Following a period of bank de-regulation, the new millennium brought a drastic change, with many new regulations. Some of these are the result of the financial crisis of 2008-2009. Other regulations, such as the introduction in 2005 of International Financial Reporting Standards (IFRS) for

quoted companies in the EU, can be related to the introduction of a new global accounting regime. It is evident from annual reports of banks that the number of new regulations in recent years is high and that they cover many different functional areas. The objectives of these regulations are also ambitious; to improve governance and control, contributing to a high level of financial stability for banks. These objectives are obviously of great concern for an industry that directly and indirectly affects the financial situation not only of individuals and organizations but also nation states. Considering the importance of banks in society, it is of little surprise that the attention of both scholars and practitioners has been directed towards how banks comply with new regulations and if the intended objectives of the regulations are met. This book will be of great value to all those interested in financial stability matters (practitioners, policy-makers, students, academics), as well as to accounting and finance scholars.
