Online Terrorist Propaganda, Recruitment, and Radicalization is most complete treatment of the rapidly growing phenomenon of how terrorists' online presence is utilized for terrorism funding, communication, and recruitment purposes. The book offers an in-depth coverage of the history and development of online "footprints" to target new converts, broaden their messaging, and increase their influence. Chapters present the emergence of various groups; the advancement of terrorist groups' online presences; their utilization of video, chat room, and social media; and the current capability for propaganda, training, and recruitment. With contributions from leading experts in the field—including practitioners and terrorism researchers—the coverage moves from general factors to specific groups practices as relate to Islamic State of Iraq and the Levant (ISIL), and numerous other groups. Chapters also examine the lone wolf phenomenon as a part of the disturbing trend of self-radicalization. A functional, real-world approach is used regarding the classification of the means and methods by which an online presence is often utilized to promote and support acts of terrorism. Online Terrorist Propaganda, Recruitment, and Radicalization

There can be no products without processes. Though this statement may seem to be no more than an overused generalization, it encapsulates the undoubted importance of processes and process-oriented approaches in language teaching and learning. In foreign language education in recent decades, researchers and practitioners alike are increasingly focusing their attention on: 1) the learner as the active subject of learning and the internal processes that constitute his/her learning leading to the development of communicative competence; 2) teaching approaches, curricula and materials that reflect this view of language learning; and 3) other factors such as the sociocultural context, social interactions and discourse, and individual learner characteristics and differences. The theme of this book reflects this paradigm shift, and the papers included here from

the disciplines of foreign language education and second language acquisition provide vital insights into processes in curriculum planning, teaching methodology, teacher education and professional development, language acquisition, language discourse, classroom instruction and interactions, the development of language skills and learning strategies, and language learning motivation.
