Forensic Psychology, 4th edition is a market-leading Canadian text that provides stimulating and accessible course materials by pioneers in the field. The authors have taken a broad-based perspective that incorporates both experimental and clinical topics. The text covers topics that might otherwise be discussed in traditional social and cognitive psychology courses-including eyewitness testimony, jury decision making, and police procedures-as well as topics that are clinical in nature and might otherwise be discussed in traditional personality or abnormal psychology courses-such as the meaning of being unfit to stand trial, mentally disordered offenders, and psychopathy. The authors' goal in this edition was to update important ideas, issues, and research in a way that students will understand and enjoy, and in some cases find useful in their professional careers.

Far too often, children and youth experience trauma, from rare events such as mass shootings, terrorism attacks, and school lockdowns, to very common occurrences such as bullying, exposure to drugs and alcohol, or various mental health issues. They can experience these events both directly and indirectly (from surfing the internet, watching television, or through their friends). Our children spend a large portion of their day at school interacting with other students, teachers, and school personnel, where these topics are raised and discussed. This edited volume addresses how our teachers and school personnel can help students deal with these potentially traumatic events to reach the most positive possible outcomes. This collection brings together leading experts, including academics and professionals working in the field, to provide the most current evidence-based

practices on how to help students who may have experienced or witnessed trauma. It presents research and advice on how to respond to traumatic events regarding bullying; drugs and alcohol; sexual abuse; mental health; lesbian, gay, bisexual, transgender, and queer (LGBTQ) safety; stranger danger; childhood disruptive behaviors; school shootings and lockdowns; and terrorism. It also includes a chapter focused on how to implement a school safety program. Schools cannot deal with these issues alone; effective strategies must engage family members and the broader community. Hence, the collection includes a chapter on how schools can partner with families and the communities they reside in to bring about positive change. All this work pays close attention to cultural and religious sensitivity, socio-economic variabilities, diversity issues, and developmental stages.

Finding the Truth in the Courtroom SAGE Publications
Eyewitness research has focused mainly on stranger identification, but identification is also critical for the "familiar stranger", and understanding how variability in an eyewitness's familiarity with the perpetrator may influence recall and recognition accuracy will facilitate swifter and more just resolutions to crime. Familiarity and Conviction in the Criminal Justice System examines the notion of familiarity between an eyewitness/victim and a perpetrator, ranging from complete unfamiliarity (as with a total stranger) to a very familiar other. Authors Joanna Pozzulo, Emily Pica, and Chelsea Sheahan define what is meant by "familiarity" in an eyewitness context and how it has been operationalized and manipulated, exploring factors that may interact with familiarity and examining jurors' perceptions of it. The first half of the book draws on various sub-areas of psychology to understand familiarity against the backdrop of eyewitness identification: social psychology theories of how familiarity is established; cognitive psychology and its theories of recognition; face processing literature; and eyewitness literature. The second half of the book surveys system and estimator variables that influence identification, such as lineup procedures, interviewing techniques, the role of age, race, and more; as well as how familiarity is weighed in juror decision-making. A final chapter issues a call for continuing research examining the notion of familiarity and its impact on the criminal justice system.

'Finding the Truth in the Courtroom' combines the science behind deception and memory and their relation in court. Testimonies are often times the most important piece of evidence in legal cases. Hence, this book shows how such testimonies can be riddled with deception and/or memory errors, how to detect them, and what you can against them.
