### ELAINE JOURNEY

**Dark Matter** University of Chicago Press

In the near future, we map the elusive 'dark matter' around us, only to find out that it is hell itself... As the satanic President Razour attempts to bring forward Armageddon to prevent humanity repenting, the fate of us all rests in the hands of Cleric20, a hedonistic loner with a chequered past, and his robot sidekick, GiX.

Grossly ambitious and rooted in scientific scholarship, *The Other Dark Matter* shows how human excrement can be a life-saving, money-making resource—if we make better use of it. The average person produces about four hundred pounds of excrement a year. More than seven billion people live on this planet. Holy crap! Because of the diseases it spreads, we have learned to distance ourselves from our waste, but the long line of engineering marvels we've created to do so—from Roman sewage systems and medieval latrines to the immense, computerized treatment plants we use today—has also done considerable damage to the earth's ecology. Now scientists tell us: we've been wasting our waste. When recycled correctly, this resource, cheap and widely available, can be converted into a sustainable energy source, act as an organic fertilizer, provide effective medicinal

therapy for antibiotic-resistant bacterial infection, and much more. In clear and engaging prose that draws on her extensive research and interviews, Lina Zeldovich documents the massive redistribution of nutrients and sanitation inequities across the globe. She profiles the pioneers of poop upcycling, from startups in African villages to innovators in American cities that convert sewage into fertilizer, biogas, crude oil, and even life-saving medicine. She breaks taboos surrounding sewage disposal and shows how hygienic waste repurposing can help battle climate change, reduce acid rain, and eliminate toxic algal blooms. Ultimately, she implores us to use our innate organic power for the greater good. Don't just sit there and let it go to waste.

Scientific theory holds that ninety percent of all matter in the universe is "dark matter", which we cannot see but which exerts a gravitational force. The universe seems to be perfectly balanced at the critical density which counters the outward expansion of the galaxies with their inward gravitational pull on one another. Too much matter or too little could bring about the end of the universe - and an alien species has begun to import dark matter from a parallel universe into our own in an attempt to do just that! Unknowingly, a contaminated USS Voyager has been leaving a trail of the deadly material across the Delta Quadrant ever since their first meeting with Romulan scientist Telek R'Mor. Now Captain Janeway and her crew are forced to retrace their epic journey to recover lost quantities of the dark matter, encountering old foes and allies while striving to outrace the cataclysmic doom which threatens not one but two realities. Malevolent forces plot against Voyager's quest... Meanwhile, Commander Chakotay and

Ensign Paris are still cut off from contact with their captain, their ship - and their universe!

The most thrilling, genre-busting, unlikely science book you'll ever read, from the world-renowned, multi-award-winning, superstar physicist Lisa Randal. 66 million years ago, a ten-mile-wide object from outer space hurtled into the Earth at incredible speed. The impact annihilated the dinosaurs, along with three-quarters of the other species on the planet. But what if this catastrophe was the sign of something greater: an opening vista onto the interconnectedness of the universe itself? This is the story of the astounding forces that underpin our existence; a horizon-expanding tour of the cosmos that unifies what we know about the universe with new thinking. From the far-flung reaches of space, the makeup of the universe and our solar system's place within it, to the mysterious and elusive stuff of dark matter and how it affects life here on Earth. 'A fascinating, and surprisingly simple, theory...and a tantalising premise' The Times 'Extremely engaging' BBC Focus

This book is a new look at one of the hottest topics in contemporary science, Dark Matter. It is the pioneering text dedicated to sterile neutrinos as candidate particles for Dark Matter, challenging some of the standard assumptions which may be true for some Dark Matter candidates but not for all. So, this can be seen either as an introduction to a specialized topic or an out-of-the-box introduction to the field of Dark Matter in general. No matter if you are a theoretical particle physicist, an observational astronomer, or a ground based experimentalist, no matter if you are a grad student or an active researcher, you can benefit from this text, for a simple reason: a non-standard candidate for Dark Matter can teach you a lot about what we truly know about our standard picture of how the Universe works.

Dark matter, the invisible substance that constitutes the bulk of all matter in the universe, remains one of science's greatest mysteries. But what if it actually is nothing more than ordinary matter purposely hidden from our view? What if we are only allowed to see a small fraction of the stars in our galaxy, because the vast majority of star systems are teeming with aliens who wish to remain unseen? Marc Zemin, a brilliant student of astrophysics, is the first human to ever stumble upon this startling secret, when his experiments with wormhole travel cause aliens to land on Earth and whisk him away into space. To his astonishment, the aliens want his help in fighting a colossal galactic war that is rapidly spiraling out of control. But as he struggles to survive from battle to battle across the farthest reaches of the galaxy, he begins to uncover a horrifying conspiracy at play, striving to keep the warring civilizations in continuous conflict with each other. A desperate race against time ensues, as he and a handful of newfound alien friends try to stop the war and confront this mysterious, powerful force bent on destroying all life in the galaxy. But any hope of their success surprisingly appears to hinge on just one thing - whether or not Marc has the strength to overcome his own demons and face the shattering truth about who he really is. Collaborators for more than four decades, lawyer, author, filmmaker, and multimedia artist Alexander Kluge and social philosopher Oskar Negt are an exceptional duo in the history of Critical Theory precisely because their respective disciplines operate so differently. *Dark Matter* argues that what makes their contributions to the Frankfurt School so remarkable is how they think together in spite of these differences. Kluge and Negt's "gravitational thinking" balances not only the abstractions of theory with the concreteness of the aesthetic, but also their allegiances to Frankfurt School mentors with their fascination for other German, French, and Anglo-American thinkers distinctly outside the Frankfurt tradition. At the core of all their adventures in gravitational thinking is a profound sense that the catastrophic conditions of modern life are not humankind's unalterable fate. In opposition to modernity's disastrous state of affairs, Kluge and Negt regard the huge mass of dark matter throughout the universe as the lodestar for thinking together with others, for dark matter is that absolute guarantee that happier alternatives to our calamitous world are possible. As

illustrated throughout Langston's study, dark matter's promise—its critical orientation out of catastrophic modernity—finds its expression, above all, in Kluge's multimedia aesthetic.
