LIZETH YARELI

Prevention of mother-to-child transmission of hepatitis B virus (HBV) Clinics: Internal Medicine

The Department of Child and Adolescent Health has developed guidelines on optimal feeding of low birth weight infants in low- and middle-income countries. These guidelines include recommendations on what to feed low-birth weight infants, when to start feeding, how to feed, how often and how much to feed. The guidelines were developed using the process described in the WHO Handbook for Development of Guidelines. Systematic reviews were conducted to answer 18 priority questions identified by the guidelines development group. The population of interest is low-birth weight infants, and the critical outcomes include mortality, severe morbidity, growth and development. The implementation of these guidelines in low- and middle-income countries is expected to improve care and survival of low birth weight infants.

Snakebites are well-known medical emergencies in many parts of the world especially in rural areas. Agricultural workers and children are most affected. The incidence of snakebite mortality is particularly high in South-East Asia. Rational use of snake anti-venom can substantially reduce mortality and morbidity due to snake bites. These guidelines are a revised and updated version of those published in 2011. The geographical coverage extends from India in the west to DPR Korea and Indonesia in the east Nepal and Bhutan in the north and to Sri Lanka and Indonesia in the south and south-east. Snakes inhabiting the Indonesian islands east of Wallace's line (West Papua and Maluku Islands) are part of the Australasian elapid fauna differing from those west of this line. This publication aims to pass on a digest of available knowledge about all clinical aspects of snake-bite to medically trained personnel including medical doctors nurses dispensers and community health workers. They aim to provide sufficient practical information to allow medically trained personnel to assess and treat patients with snake-bites at different levels of the health service.

Perioperative Critical Care CBS Publishers & Distributors Pvt Limited, India

This publication is one of a series of practical field guides produced by the Pan American Health Organization with best practice guidance for immunisation programmes in the region. This guide describes the strategies that have made the elimination of neonatal tetanus in the Americas possible,

highlighting the progress made in surveillance to identify and monitor high-risk areas as well as immunisation activities geared towards women of childbearing age who live in those areas. Sections cover: epidemiology, clinical aspects, case definitions and investigations, surveillance, data analysis, control in high risk areas, programme monitoring, vaccine storage and supply.

Since the detection of the first case of COVID-19, the virus has been wreaking havoc not only among the general public and health care workers but also among the think tanks. A lot of unknown facts about the disease make the situation even more complicated. Although a lot of literature regarding COVID-19 is available on the internet, most are vague and discrete. In such a situation, A Handbook of Obstetrics and Gynaecology care during pandemic of a novel respiratory virus was written to provide all the current guidelines related to the disease in pregnancy, which will help minimise confusion related to patient care. Various sections starting from basic understanding to the key changes in management in the context of the COVID-19 pandemic have been addressed, according to the current evidence. The author feels this book will fulfill the gap of knowledge about the practice of obstetrics and gynecology during the era of COVID-19 and will help practitioners avoid confusion related to patient care.

Kangaroo mother care is a method of care of preterm infants which involves infants being carried, usually by the mother, with skin-to-skin contact. This guide is intended for health professionals responsible for the care of low-birth-weight and preterm infants. Designed to be adapted to local conditions, it provides guidance on how to organize services at the referral level and on what is needed to provide effective kangaroo mother care.

[Advances in Neonatology](#) Alan R. Liss

Improved conditions of care for premature infants have led to markedly increased survival rates over the last few decades, particularly in very low and extremely low birth weight infants. Nutritional measures play a central role in the long-term outcome, health and quality of life of these premature infants. In this publication, leading experts from all 5 continents present the most recent evidence and critical analyses of nutrient requirements and the practice of nutritional care (with the focus on very low birth weight infants) to provide guidance for clinical application. After the introductory chapters, covering nutritional needs and research evidence in a more general manner, topics such as amino acids and proteins, lipids, microminerals and vitamins, parenteral and enteral nutrition as well as approaches to various disease conditions are addressed. Due to its focus on critical appraisals and recommendations, this book is of interest not only for the researcher who wants to keep up to date, but also for the clinician faced with premature infants in his practice.

A Handbook of Obstetrics and Gynaecology Care during pandemic of a novel respiratory virus EduGorilla Community Pvt. Ltd.

The book presents an update on public health and nutrition problems of developing countries with a description of approaches used and efficiency of trials undertaken for addressing these. Additionally, it highlights the experiences emerging from up-scaling intervention programme planning and implementation.

[Guidelines on Optimal Feeding of Low Birth Weight Infants in Low- And Middle-Income Countries](#) World Health Organization
 This is the first textbook of neonatology from the Indian subcontinent which has served as the most trusted resource to undergraduate and postgraduate medical students in pediatrics and obstetrics and gynecology for four decades. The book has been extensively revised and updated to incorporate recent advances in the art and understanding of perinatal disorders. All the chapters have been reorganized, revised and rewritten to incorporate additional evidence-based information to make it an up-do-date and comprehensive textbook of neonatology. The book presents an harmonious blend of latest physiological basis of neonatal disorders and the current state-of-the-art information

pertaining to their management through a simplified algorithmic approach. Neonatology provides the greatest scope for health preventive and promotive strategies which have been covered in depth. A number of new photographs, images, flow diagrams and tables have been included to make it more reader-friendly and comprehensive. The initiatives taken by Government of India for improving newborn care in the community have been discussed in detail. The distinctive feature and hallmark of the book is the brevity, clarity and problem-oriented approach. The book shall serve as a useful and practical manual to the pediatric and obstetric resident staff and consultants working in the medical colleges, corporate hospitals and private maternity nursing homes.

Nutritional Care of Preterm Infants Springer Nature

The definitive reference work on the developing brain from conception through the first year of life, this book provides specialists involved in the management of the fetus and the neonate with the latest information on the developmental neurology and pathology of the developing central nervous system.

entrance examinations of AIIMS. The material is prepared after a thorough scanning of the latest textbooks, journals and research.

Hospital Diets Jaypee Brothers Medical Publishers

WHO and UNICEF jointly developed this global strategy to focus world attention on the impact that feeding practices have on the nutritional status, growth and development, health, and thus the very survival of infants and young children. The strategy is the result of a comprehensive two-year participatory process. It is based on the evidence of nutrition's significance in the early months and years of life, and of the crucial role that appropriate feeding practices play in achieving optimal health outcomes. The strategy is intended as a guide for action; it identifies interventions with a proven positive impact; it emphasizes providing mothers and families the support they need to carry out their crucial roles, and it explicitly defines the obligations and responsibilities in this regards of governments, international organizations, and other concerned parties.

Neonatal Emergencies JP Medical Ltd

Concise and easy to read, this popular manual has provided a practical approach to the diagnosis and medical management of problems in the newborn through seven outstanding editions. The Eighth Edition of Cloherty and Stark's Manual of Neonatal Care maintains that tradition of excellence, offering NICU physicians, neonatal-perinatal fellows, residents, and neonatal nurse practitioners quick access to key clinical information, fully updated to reflect recent advances in the field. Written in an easy-access outline format, this extensively revised edition covers current, practical approaches to the evaluation and management of routine and complex conditions encountered in the fetus and the newborn.

Global Strategy for Infant and Young Child Feeding Elsevier Health Sciences

This issue of Pediatric Clinics offers an update on Advances in Neonatology. Guest Editors Drs. Lucky Jain and David Carlton have assembled a panel of world-class experts who offer reviews on topics including Trends in birthing, gestational age, birth weight and mortality in newborns; Late Prematurity; Advances in newborn resuscitation; Approaches to infants with congenital anomalies; Advances in neonatal surgery; Respiratory failure in the term and near term infant; Mechanical ventilation of the newborn; Pulmonary hypertension in the newborn; Bronchopulmonary dysplasia; Extracorporeal membrane oxygenation; Necrotising enterocolitis; Hyperbilirubinemia; Retinopathy of Prematurity; Surgical approaches to an infant with congenital heart disease; Hypoxic ischemic encephalopathy; Neonatal sepsis; and Quality improvement in neonatology.

Pocket Book of Hospital Care for Children World Health Organization

Neonatal seizures represent one of the most frequent neurological events in newborn infants, often reflecting a variety of different pre-, peri-, or postnatal disorders of the central nervous system (CNS). They are also a common manifestation of metabolic abnormality in newborn period and often represent the first sign of neurological dysfunction in neonates. They may be symptomatic or cryptogenic, herald subsequent epilepsy, can be associated with potential morbidity and mortality, and may be used as a factor in considering long-term prognosis. Despite the enormous clinical significance of these events, many aspects of their management are not well supported with evidence-based recommendations. These guidelines are intended to be of use for neonatologists, paediatric neurologists, paediatricians, general practitioners, nurse practitioners, nurses and other health professionals who may be in contact with infants experiencing seizures within the first 28 days of life (age up to 44 weeks postconception). The guidelines are framed so as to be applied by health care providers practicing in a wide range of health care facilities, from those with limited resources to tertiary care centers.

CARE OF THE NEW BORN REVISED 8ED (2017) Notion Press

This book fifth edition of Pediatric Nephrology has been important advances of the mechanisms and management of various renal disorders in children have taken place since the previous edition of this book. These have been incorporated and the contents extensively revised. Several new authors, having many years of clinical and investigative experience in the area of their expertise, have contributed. The chapters on electrolyte and acid-base disorders, nephrotic syndrome, acute kidney injury, urinary tract infection, tubulopathies, chronic kidney disease, renal replacement therapy, voiding disorders and neonatal renal problems have been expanded and provide most recent information, particularly concerning management of related diseases. A small section on prevention of kidney diseases has been added. The emphasis remains on renal function and its derangement, diagnostic evaluation and treatment of important conditions.

Donald School Manual of Practical Problems in Obstetrics World

Health Organization

Written by outstanding authorities from all over the world, this comprehensive new textbook on pediatric and neonatal ventilation puts the focus on the effective delivery of respiratory support to children, infants and newborns. In the early chapters, developmental issues concerning the respiratory system are considered, physiological and mechanical principles are introduced and airway management and conventional and alternative ventilation techniques are discussed. Thereafter, the rational use of mechanical ventilation in various pediatric and neonatal pathologies is explained, with the emphasis on a practical step-by-step approach. Respiratory monitoring and safety issues in ventilated patients are considered in detail, and many other topics of interest to the bedside clinician are covered, including the ethics of withdrawal of respiratory support and educational issues. Throughout, the text is complemented by numerous illustrations and key information is clearly summarized in tables and lists.

Review of Pediatrics & Neonatology Pan American Health Org

WHO estimates that in 2015, 257 million people were living with chronic hepatitis B virus (HBV) infection worldwide, and that 900 000 had died from HBV infection, mostly as a result of cirrhosis or hepatocellular carcinoma. Most HBV-associated deaths among adults are secondary to infections acquired at birth or in the first five years of life. In May 2016, the World Health Assembly endorsed the Global health sector strategy on viral hepatitis, which calls for the elimination of viral hepatitis as a public health threat by 2030 (defined as a 90% reduction in incidence of new infections and a 65% reduction in mortality). Elimination of HBV infection as a public health threat requires a reduction in the prevalence of hepatitis B surface antigen (HBsAg) to below 0.1% in children 5 years of age. This can be achieved through universal immunization of newborns against hepatitis B and other interventions to prevent mother-to-child transmission of HBV. These guidelines provide evidence-based guidance on the use of peripartum antiviral prophylaxis in HBsAg-positive pregnant women for the prevention of mother-to-child transmission of HBV.

Guidelines on Neonatal Seizures Lippincott Williams & Wilkins

This book is a comprehensive guide to the diagnosis and management of diseases and disorders in children and adolescents. Beginning with a chapter on the newborn, the next sections provide step by step discussion on growth and development, nutrition, and immunisation, followed by a chapter on infectious diseases. Presented in algorithm-format for ease of understanding, each of the subsequent sections details the management of disorders in a different system of the body, covering both common and more complex cases seen in day to day practice. The text concludes with chapters on paediatric surgery and World Health Organisation (WHO) standard algorithms. Key points Comprehensive guide to diagnosis and management of paediatric diseases and disorders Covers common and more complex cases in all systems of the body Includes section on paediatric surgery Provides discussion on World Health Organisation standard algorithms
