Geologic Analysis of Naturally Fractured Reservoirs Rowman & Littlefield

This volume is a compendium of the rich archeological and literary evidence on the Iranian world in its larger sense, comprising part of what is now Soviet Central Asia and Afghanistan as well as Iran proper. Originally published in 1984.

The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905. *Managing Quality Cultural Tourism* Elsevier

This text illustrates bone marrow aspirate, imprint and biopsy specimens showing characteristic features of a wide variety of neoplastic and non-neoplastic conditions. While the focus is on Wright-stained smears and hematoxylin-eosin stained biopsies, other key histochemical and immunohistochemical stains are illustrated that are vital for proper diagnosis. After a brief review of the normal bone marrow, reactive changes in the marrow are illustrated, including the bone marrow response in constitutional disorders and to metabolic changes throughout the body.

This is followed by specific infectious disorders in the marrow and other non-neoplastic disorders. The remainder of the Atlas illustrates the various neoplasms that involve the bone marrow, including leukemias, lymphomas and non-hematopoietic neoplasms. The hematologic neoplasms are classified using the 2016 World Health Organization (WHO) classification. This overview of bone marrow disorders illustrates a wide variety of diseases that practicing pathologists and hematologists will encounter in their routine practice. Mustard Lung Sage Publications (CA) Geologists, engineers, and petrophysicists concerned with hydrocarbon production from naturally fractured reservoirs will find this book a valuable tool for obtaining pertinent rock data to evaluate reserves and optimize well location and performance. Nelson emphasizes geological, petrophysical, and rock mechanics to complement other studies of the subject that use well logging and classical engineering approaches. This well organized, updated edition contains a wealth of field and laboratory data, case histories, and practical advice. A great

how-to-guide for anyone working with fractured or highly anisotropic reservoirs Provides real-life illustrations through case histories and field and laboratory data *Facility Layout* Princeton University Press This book presents a structured approach to develop mathematical optimization formulations for several variants of facility layout. The range of layout problems covered includes row layouts, floor layouts, multi-floor layouts, and dynamic layouts. The optimization techniques used to formulate the problems are primarily mixed-integer linear programming, second-order conic programming, and semidefinite programming. The book also covers important practical considerations for solving the formulations. The breadth of approaches presented help the reader to learn how to formulate a variety of problems using mathematical optimization techniques. The book also illustrates the use of layout formulations in selected engineering applications, including manufacturing, building design, automotive, and hospital layout. *International Encyclopedia of Teaching and Teacher Education* Cambridge University Press

Mustard Lung: Diagnosis and Treatment of Respiratory Disorders in Sulfur-Mustard Injured Patients brings together the details regarding pathophysiology, medication, and protective issues to provide a comprehensive look at health problems associated with sulfur mustard injury. It provides a bench-to-bedside look at the long term complications of vesicant exposure in humans as well as how mustard gas exposure affects lung function. By providing guidelines and approaches for the diagnosis, pathogenesis, and treatment of SM injury cases, this book is helpful for a wide range of medical researchers and clinicians. For decades, chemical respiratory disorders were diagnosed and managed traditionally similar to other chronic respiratory diseases. However, the exact nature of chemical respiratory disorders is different and needs to be treated as such. Includes the most up-to-date basic and clinical research findings on sulfur mustard from top researchers Provides information on chemical agents, complications that arise due to sulfur mustard exposure, and drugs available to treat injuries Contains an appendix with practical prescription

recommendations for patients affected by mustard lung Provides a bench-to-bedside look at the long term complications of vesicant exposure in humans as well as how mustard gas exposure affects lung function

The Economic Geology of Iran is a complete and comprehensive book about mineral deposits, energy and water resources of Iran. Dr. Mansour Ghorbani has travelled to each of the huge variety of locations that feature the resources covered, personally verifying the details of them all. The book starts by describing the geography and physiography of Iran as well as its various climatic regions and the diverse corresponding vegetation. Then the book gives an excellent overview of the geology of the country, followed by the history of mining in Iran up to now. The author describes also the metallogenic and mineralization phases of Iran, its mineral zones and belts, and, more generally, the distribution of mineral deposits in the country. Dr. Ghorbani gives us also an analysis of the position of Iran in terms of global mineral resources, as

well as the role that the country's mineral, energy and natural resources play in its overall economy. The book finishes with also provides a complete list of Iranian mineral deposits. This book is a perfect source of information for all students and researchers in the field of geo-science at the university level but also for mining and oil companies that would like to work, invest and get involved in such businesses in Iran.

This volume provides a reflective summary of research in parasitology in the late 20th Century combined with a vision of the major challenges and potential successes in the 21st Century. It has been compiled from selected papers presented at the Eighth International Congress of Parasitology. A wide variety of topics are covered including medical, veterinary, and plant parasitology, by contributors from many different countries. Chapters within the book consider current research on the biology of parasites, and new strategies in the transmission and control of parasitic diseases. This book represents an invaluable resource for all parasitologists.

Not only is it an up- to-date summary of research, but it is also a thought provoking look at the future.

Managing Quality Cultural Tourism is an authoritative look at how to manage cultural tourist sites to best meet the needs of the visitors, the presenters and the site itself. As cultural tourism increases the management of heritage sites becomes more complex. Priscilla Boniface addresses these crucial management issues using a marketing approach to identify the needs of all concerned. This volume is specifically aimed at professionals and students of leisure, tourism and heritage management. It provides an invaluable background to cultural tourism and then focuses on some important issues involved with managing a heritage site - education, entertainment and preservation - and considers appropriate ways of dealing with the needs of the tourist, the presenters and the cultural site. Managing Quality Cultural Tourism suggests a way forward for cultural tourism. It is an indispensable tool for all involved in tourism and

heritage industries.

An Island of Stability Sidestone Press Presents state-of-the-art knowledge of heterogeneous catalysts including new applications in energy and environmental fields This book focuses on emerging techniques in heterogeneous catalysis, from new methodology for catalysts design and synthesis, surface studies and operando spectroscopies, ab initio techniques, to critical catalytic systems as relevant to energy and the environment. It provides the vision of addressing the foreseeable knowledge gap unfilled by classical knowledge in the field.

Heterogeneous Catalysts: Advanced Design, Characterization and Applications begins with an overview on the evolution in catalysts synthesis and introduces readers to facets engineering on catalysts; electrochemical synthesis of nanostructured catalytic thin films; and bandgap engineering of semiconductor photocatalysts. Next, it examines how we are gaining a more precise understanding of catalytic events and materials under working conditions. It covers bridging pressure gap in surface catalytic studies; tomography in catalysts design; and

resolving catalyst performance at nanoscale via fluorescence microscopy. Quantum approaches to predicting molecular reactions on catalytic surfaces follows that, along with chapters on Density Functional Theory in heterogeneous catalysis; first principles simulation of electrified interfaces in electrochemistry; and high-throughput computational design of novel catalytic materials. The book also discusses embracing the energy and environmental challenges of the 21st century through heterogeneous catalysis and much more. Presents recent developments in heterogeneous catalysis with emphasis on new fundamentals and emerging techniques Offers a comprehensive look at the important aspects of heterogeneous catalysis Provides an applications-oriented, bottoms-up approach to a high-interest subject that plays a vital role in industry and is widely applied in areas related to energy and environment *Heterogeneous Catalysts: Advanced Design, Characterization and Applications* is an important book for catalytic chemists, materials scientists, surface chemists, physical chemists, inorganic

chemists, chemical engineers, and other professionals working in the chemical industry.

Including a new preface that discusses the Iranian mood during and after the June 2009 presidential election and subsequent protests, this is an intimate look at a paradoxical country from a uniquely qualified journalist. The grandson of an eminent ayatollah and the son of an Iranian diplomat, Hooman Majd offers perspective on Iran's complex and misunderstood culture through an insightful tour of Iranian culture, introducing fascinating characters from all walks of life, including zealous government officials, tough female cab drivers, and open-minded, reformist ayatollahs. It's an Iran that will surprise readers and challenge Western stereotypes. A Los Angeles Times and Economist Best Book of the Year With a New Preface *Voices of a Massacre* UPenn Museum of Archaeology A one-of-a-kind presentation of the major achievements in statistical profile

monitoring methods Statistical profile monitoring is an area of statistical quality control that is growing in significance for researchers and practitioners, specifically because of its range of applicability across various service and manufacturing settings. Comprised of contributions from renowned academicians and practitioners in the field, *Statistical Analysis of Profile Monitoring* presents the latest state-of-the-art research on the use of control charts to monitor process and product quality profiles. The book presents comprehensive coverage of profile monitoring definitions, techniques, models, and application examples, particularly in various areas of engineering and statistics. The book begins with an introduction to the concept of profile monitoring and its applications in practice. Subsequent chapters explore the fundamental concepts, methods, and issues related to statistical profile monitoring, with topics of coverage including: Simple and multiple linear profiles Binary response profiles Parametric and nonparametric nonlinear profiles Multivariate linear profiles monitoring Statistical process control for geometric specifications Correlation and

autocorrelation in profiles Nonparametric profile monitoring Throughout the book, more than two dozen real-world case studies highlight the discussed topics along with innovative examples and applications of profile monitoring. *Statistical Analysis of Profile Monitoring* is an excellent book for courses on statistical quality control at the graduate level. It also serves as a valuable reference for quality engineers, researchers and anyone who works in monitoring and improving statistical processes.

The second volume in the Wiley reference series in Biostatistics. Featuring articles from the prestigious Encyclopedia of Biostatistics, many of which have been fully revised and updated to include recent developments, *Biostatistics in Clinical Trials* also includes up to 25% newly commissioned material reflecting the latest thinking in: Bayesian methods Benefit/risk assessment Cost-effectiveness Ethics Fraud With exceptional contributions from leading experts in academia, government and industry, *Biostatistics in Clinical Trials* has been

designed to complement existing texts by providing extensive, up-to-date coverage and introducing the reader to the research literature. Offering comprehensive coverage of all aspects of clinical trials *Biostatistics in Clinical Trials*: Includes concise definitions and introductions to numerous concepts found in current literature Discusses the software and textbooks available Uses extensive cross-references helping to facilitate further research and enabling the reader to locate definitions and related concepts *Biostatistics in Clinical Trials* offers both academics and practitioners from various disciplines and settings, such as universities, the pharmaceutical industry and clinical research organisations, up-to-date information as well as references to assist professionals involved in the design and conduct of clinical trials.

This new Encyclopedia draws upon articles in *The International Encyclopedia of Education*, 2nd Edition (described by Choice as being "a premier resource when judged on virtually every criteria applied to a reference work") with revisions as well

as new articles. The purpose of the volume is to provide classroom researchers, teacher educators, and teachers with a sound, reasonable body of knowledge that can be used to guide their efforts to understand and improve the teaching-learning process. While individual research studies may yield different results and recommendations the compilation of such studies by experts in the field provide useful guidelines within which researchers, teacher educators and teachers can operate. The entries in this encyclopedia will provide a body of knowledge to inform, guide and/or justify their teaching practices. The second edition is divided into two parts: teaching and teacher education. Part one contains eight sections: the nature and characteristics of teachers, theories and models of teaching, instructional programs and strategies, teaching skills and techniques, school and classroom factors, students and the teaching-learning process, teaching for specific objectives, and the study of teaching. Part two contains three sections: concepts and issues in teacher education, generic initial teacher education, and continuing teacher education.

This volume is based on contributions from the First International Conference on "Recent Advances in Natural Language Processing" (RANLP'95) held in Tzigrav, Bulgaria, 14-16 September 1995. This conference was one of the most important and competitively reviewed conferences in Natural Language Processing (NLP) for 1995 with submissions from more than 30 countries. Of the 48 papers presented at RANLP'95, the best (revised) papers have been selected for this book, in the hope that they reflect the most significant and promising trends (and latest successful results) in NLP. The book is organised thematically and the contributions are grouped according to the traditional topics found in NLP: morphology, syntax, grammars, parsing, semantics, discourse, grammars, generation, machine translation, corpus processing and multimedia. To help the reader find his/her way, the authors have prepared an extensive index which contains major terms used in NLP; an index of authors which lists the names of the authors and

the page numbers of their paper(s); a list of figures; and a list of tables. This book will be of interest to researchers, lecturers and graduate students interested in Natural Language Processing and more specifically to those who work in Computational Linguistics, Corpus Linguistics and Machine Translation. [Precarious Lives](#) John Wiley & Sons Kurdish Politics in the Middle East analyzes Kurdish politics in Iran, Iraq, and Turkey and places Kurdish socio-political developments in the context of regional and global politics. The book also explains the impact of the downfall of Saddam Hussein's regime in Iraq on Kurdish autonomy.

The Royal Cemetery at Tepe Marlik was excavated in one incredible 14-month season. The 53 intact tombs contained a

fabulous array of precious metal vessels, jewelry, sculpture, weapons, and other artifacts. The gripping tale of these excavations and a detailed report of the excavation and the artifacts from the burials is presented in these two lavishly illustrated volumes. University Museum Monograph, 87

In 1979, the world was taken by surprise when the Iranian people revolted against their westernized ruling elite, and traded in the Shah for a radical Islamic republic ruled by the most senior Shiite cleric, ayatollah Khomeini. The Islamic revolution of Iran was a breaking point in history. It was the defining moment for Islam in the twentieth century and fuelled the Islamic confidence that has since then only grown. The roots of the revolution were deeply entrenched in the recent history of Iran, yet in the West, almost no one knew what was happening. The rise of ayatollah Khomeini and the Islamic republic seemed to have come out of nowhere. In this book, historian Mark Thiessen tries to answer the

most important questions of the Islamic revolution. What happened, and where did it come from? This book explores the background of the revolution, and gives a detailed account of its course. It analyzes the rise of Khomeini, and his ideology. By studying the archives of the Dutch embassy in Tehran, Thiessen finally tries to find out about the way the Dutch mission experienced and interpreted the revolution, at a time when the outcome was not yet clear.

Western patients are increasingly travelling to developing countries for health care and developing countries are increasingly offering their skills and facilities to paying foreign customers. The potential and implications of this international trade in medical services is explored in this book through analysis of the market.

* Third edition of a well-known and well established text both in industry and for teaching * Fully up-to-date and includes

extra problems This book is an aid to heat exchanger design written primarily for design and development engineers in the chemical process, power generation, and refrigeration industries. It provides a comprehensive reference on two-phase flows, boiling, and condensation. The text covers all the latest advances like flows over tube bundles and two-phase heat transfer regarding refrigerants and petrochemicals. Another feature of this third edition is many new problems at chapter ends to enhance its use as a teaching text for graduate and post-graduate courses on two-phase flow and heat transfer. - ;This book is written for practising engineers as a comprehensive reference on two-phase flows, boiling, and condensation. It deals with methods for estimating two-phase flow pressure drops and heat transfer rates. It is a well-known reference book in its third edition and is also used as a text for advanced university courses. Both authors write from practical experience as both are professional engineers. -
