Science Citation Index Springer Science & Business Media

Vols. for 1964- have guides and journal lists.

Catalogue of Scientific Papers: Fourth series. 1884-1900 Council of Europe

This volume focuses on interaction between vegetation, relief, climate, soil and fauna in the treeline ecotone, and the effects of climate change and land use in North America and Europe.

[Dictionary Catalog of the Art and Architecture Division](#) Springer Science & Business Media

Includes supplementary volumes called *Ergänzungsbände* and *Sonderbände* covering work published during and after World War II through 1954 and not abstracted in *Chemisches Zentralblatt* volumes for that period.

This book is an attempt to compile and integrate the information documented by many botanists, both Egyptians and others, about the vegetation of Egypt. The first treatise on the flora of Egypt, by Petrus Forsskäl, was published in 1775. Records of the Egyptian flora made during the Napoleonic

expedition to Egypt (1778-1801) were provided by AR. Delile from 1809 to 1812 (Kassas, 1981). The early beginning of ecological studies of the vegetation of Egypt extended to the mid-nineteenth century. Two traditions may be recognized. The first was general exploration and survey, for which one name is symbolic: Georges-Auguste Schweinfurth (1836-1925), a German scientist and explorer who lived in Egypt from 1863 to 1914. The second tradition was ecophysiological to explain the plant life in the dry desert. The work of G. Volkens (1887) remains a classic on xerophytism. These two traditions were maintained and expanded in further phases of ecological development associated with the establishment of the Egyptian University in 1925 (now the University the Swedish Gunnar of Cairo). The first professor of botany was Täckholm (1925-1929). He died young, and his wife Vivi Täckholm devoted her life to studying the flora of Egypt and gave leadership and inspiration to plant taxonomists in Egypt for some 50 years. She died in 1978. The second professor of botany in Egypt was F. W. Oliver (1929- 1932) followed by the British ecologist F. J. Lewis (1935-1947). *Agrindex* BAR International Series

Mountainous regions, which cover nearly half of the continent's area, are in many ways of vital importance for the European population. They supply much of the continent's water, are centres of biological and cultural biodiversity, provide various opportunities for recreation/ farmers. But mountainous regions are characterised by permanent natural handicaps due to topographic and climatic restrictions on economic and agricultural activity. Because of the geographical constraints to farming, work productivity is on average lower by 28% in mountain areas compared with less favoured areas, and by 40% compared with lowlands. Agriculture in mountainous regions can therefore, in general, not compete with agriculture in

advantaged lowlands and, with very few exceptions, cannot hope to become competitive in adopting intensive models in response to the growing global competition.

La Librairie française Paris, Cercle de la librairie

In 2004 the Austrian village of Hallstatt hosted the first Symposium on Hallstatt textiles, the proceedings of which are published here. Divided into three sections, the detailed and well-illustrated papers focus on material recovered from sites in Hallstatt itself, discuss the results of experimental archaeology and consider textile evidence from neighbouring Iron Age and La Tene sites in, for example, Italy, Slovakia and Moravia. The papers are all presented in both English and German and are followed by colour photographs of some of these remarkable and complex pieces of cloth.

[Background Information on Invertebrates of the Habitats Directive and the Bern Convention](#) Frontiers Media SA

Includes entries for maps and atlases.

S. Orgelbranda encyklopedja powszechna Prabhat Prakashan

A multidisciplinary index covering the journal literature of the arts and humanities. It fully covers 1,144 of the world's leading arts and humanities journals, and it indexes individually selected, relevant items from over 6,800 major science and social science journals.

Just's botanischer jahresbericht Springer Science & Business Media

This book is based on presentations by some of the world's leading experts at the Sixth International Conference on Clinical Cancer Prevention, held in St. Gallen, Switzerland, during March 2010. The main themes are the latest advances in the prevention of breast and prostate cancer and the role of infection in the development of liver and gastric cancer. Special emphasis is given to perspectives on the chemoprevention of breast cancer, as the conference included an international consensus meeting on this subject. New research findings are presented and potentially more effective cancer prevention strategies are discussed, with careful consideration of controversies. The expertise of the contributors encompasses genetics and microbiology, epidemiology, and health economics, as well as clinical cancer prevention. This book will be of interest to all who wish to learn about the most recent progress in combating the development of cancer.

The Vegetation of Egypt BRILL

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

[Grassland Farming and Land Management Systems in Mountainous Regions](#) Springer Science & Business Media

Drawing on philological studies, social history and anthropology, this book offers the first extended study of the recipes included in the Hippocratic Corpus. It examines the links between oral and written traditions in the transmission of ancient pharmacological knowledge.

Jules Philippe

With a claim to be the first work to document in detail the history of allelopathy, Willis's text provides an account of the concept of allelopathy as it has occurred through the course of botanical literature from the earliest recorded writings to the modern era. A great deal of information is presented here in a consolidated and accessible form for the first time. The book offers a unique insight into the historical factors which have influenced the popularity of allelopathy.
