'Imaging in Rheumatology' provides a unique, comprehensive review of the modalities of imaging now available to assist rheumatologists in diagnosing and managing virtually all rheumatic diseases. It is divided into three sections. The first describes in simple detail how the various modes of imaging work in practice. The second informs the reader about the use of imaging in the diagnosis of common problems. The final section provides a detailed assessment of the use of imaging in the management of the common rheumatic diseases. The clinical chapters are written by both rheumatologists and radiologists and this combined approach ensures a thorough preview of each topic explaining just what modern imaging can do to help the clinicians diagnose and manage the broad array of rheumatological diseases.

As the global geriatric population continues to grow, an increasing proportion of people reporting to emergency departments are elderly. The work-up of these patients uses more time and resources than that of younger patients, and is complicated by the fact that acute disease often presents more subtly, without the outward manifestations typically seen in younger patients. This volume focuses on the unique pathophysiology of the elderly, presenting guidelines for resuscitation, evaluation and management. The first section discusses general principles including demographics, pharmacology and pain management. The following sections cover high-risk chief presenting complaints and review geriatric emergencies. Finally, topics of particular relevance in the geriatric population are discussed, including functional assessment, end-of-life care, financial considerations

and abuse. This book provides a comprehensive, practical framework for community and academic emergency medicine practitioners, as well as emergency department administrators striving to improve delivery of care to this vulnerable, growing population.

The eureka moment is a myth. It is an altogether naïve and fanciful account of human progress. Innovations emerge from a much less mysterious combination of historical, circumstantial, and accidental influences. This book explores the origin and evolution of several important behavioral innovations including the high five, the Heimlich maneuver, the butterfly stroke, the moonwalk, and the Iowa caucus. Such creations' striking suitability to the situation and the moment appear ingeniously designed with foresight. However, more often than not, they actually arise 'as if by design.' Based on investigations into the histories of a wide range of innovations, Edward A. Wasserman reveals the nature of behavioral creativity. What surfaces is a fascinating web of causation involving three main factors: context, consequence, and coincidence. Focusing on the process rather than the product of innovation elevates behavior to the very center of the creative human endeavor.

Musculoskeletal Imaging Lippincott Williams & Wilkins *Imaging in Rheumatology: A Clinical Approach* is ideal for radiologists and rheumatologists—as well as orthopedic surgeons and others interested in applying imaging to rheumatologic diseases—and stresses conventional radiography as the most effective imaging assessment technique to help diagnose various diseases and conditions. Greenspan and Gershwin—a radiologist and rheumatologist, respectively—focus on practical, everyday use, so you can apply knowledge you learn in any clinical setting. Review Questions for MRI Springer Nature
